2025–Present Principal Software Engineer - **Atlan**

Full Remote

Driving AI-native strategy and architecture modernization across teams, with a focus on unblocking critical delivery paths and improving platform scalability. Increased throughput by 10x and reduced latency in a primary system bottleneck, then improved search quality and performance to deliver measurable customer impact. Served as a cross-team architectural liaison while leading exploratory work on knowledge-graph-augmented AI systems and fine-grained, row-level authorization at scale.

2021–2025 Co-Founder & Core Developer - **DataSQL**

Bootstrapped Startup

Co-founded and built a startup focused on unifying streaming and relational engines into a single product platform served by a SQL dialect. Served as the core developer and led a team of engineers from early market exploration to product-market fit, partnering directly with customers to build integrations and production deployments. Scaled the business to over \$1M in annual revenue while remaining fully bootstrapped. Extended the platform with modern AI capabilities including neuro-symbolic database exploration, MCP servers, data lakes, RAG workflows, vector support, and customer-specific data repositories.

2020–2021 Senior Software Engineer - **Datakin**

Remote - San Francisco, CA

At Datakin (later acquired by Astronomer), co-created the OpenLineage specification, standardizing lineage telemetry and contributing to adoption across the data ecosystem, including organizations such as Apple and Google. Developed the reference implementation, native integrations, and cloud service in Java and Python for open-source and enterprise customers. Advocated and collaborated in the open-source community to help establish industry-wide lineage standards.

2018–2020 Senior Engineer - CTO Office - **DataStax**

Full Remote - San Francisco, CA

Worked under DataStax's Chief Technologist to rapidly prototype software for a new kind of data platform on top of the Cassandra Enterprise database stack that would enable enterprises to quickly operationalize their data. Functioned as the sole backend engineer for the SaaS platform until growing the team. Innovated a new type of NoSQL query optimizer, built foundational technology, and performed market research using value proposition design. Effectively communicated asynchronously with a distributed team.

2015–2018 Principal Software Engineer - Addthis (**ORACLE** Data Cloud)

Virginia

Tysons Corner,

Full stack software engineer for analytics and data science teams in ad-tech. Independently researched, evaluated, and implemented systems that leveraged emerging technology in machine learning and big data analytics. Specialized in natural language processing, high dimensional clustering algorithms, search, and analytics. Assisted development in a novel distributed database. Developed and maintained an analytics platform under an agile methodology. 4-time hackathon winner for nlp enhanced search, data visualization, microservice interaction tracing, and in-memory analytics.

2014–2015 Software Engineer - **Mesoscale Discovery**

Gaithersburg, Maryland

Developed cloud-based laboratory management software, implemented data-driven procedures for automated reagent dispensing systems, and codified validated protocols for micro-plate test kits used in the biodefense, clinical, and life-science markets. Developed highly tested and documented software consistent with FDA regulated software systems.

2011–2013 Graduate Assistant - **Frostburg State University** Frostburg, Maryland

Assisted in teaching and held labs for the computer science department. Lectured, developed course material, and mentored students. Held consistent office hours and assisted the department with other duties. Led students in computer related extracurricular activities, including: computer security competitions, recruitment efforts, and other software projects.

2010–2011 Applications Engineer - **Micropact** Herndon, Virginia

Developed flagship java business process management software for Department of Justice and the Internal Revenue Service in a proprietary java j2ee framework. Independently worked on-site and interfaced directly with clients. Held security clearances for DOJ & IRS.

2008–2010 Web Developer - **Concept C Marketing & Design** Frederick, Maryland

Developed, deployed, and maintained responsive websites using early web technologies such as php, bootstrap, jquery, and foundation.

education

Masters of Science: Computer Science Frostburg State University, Maryland

Master's Thesis: Affine Convolutions for Font Classification

This thesis explored classifying font types using affine invariant convolutions.

Contributed to open source projects.

- 4.0/4.0 GPA
- Department Honors for academic excellence

Bachelor of Science: Computer Science Frostburg State University, Maryland
