event streaming
data observability
AI / ML

experience

2025–2026 Principal Software Engineer - **Atlan** Remote - San Francisco, CA

Lead platform modernization at Atlan through high-autonomy technical execution, reworking the primary metadata storage path to deliver a 10x throughput gain while materially improving data consistency. Drove cross-team platform alignment to reduce siloed decision-making and tightened architecture. Responsible for innovation with the Context Graph for data governance, helping to maintain Atlan leadership status with Gartner and Forrester, which included product exploration around knowledge graphs, context graphs, and context-layer design, alongside deep platform work in Iceberg-oriented data improvements, data materialization patterns, and AI-native development workflows.

2021–2025 Co-Founder & Core Developer - **DataSQR**L Remote - San Francisco, CA

Co-founded and built a bootstrapped startup with the founder of JanusGraph around a Flink platform that unified streaming and relational systems into a single developer workflow for low latency Petabyte-scale pipelines. Acted as core architect and primary builder from concept through product-market fit, while leading customer-facing integrations and production roll-outs. Scaled to sustained seven-figure annual revenue without outside funding and expanded the platform into AI-native territory with neuro-symbolic exploration, data-lake integration, RAG pipelines, vector support, and customer-specific knowledge repositories.

2020–2021 Principal Software Engineer - **Datakin** Remote - San Francisco, CA

Co-created the OpenLineage specification with a co-creator of Parquet, establishing a common lineage telemetry standard adopted across the data ecosystem, adopted by Apple and Google. Developed the Marquez OSS project. Built the reference implementation, native integrations, and managed cloud service in Java and Python for both open-source users and enterprise teams. Helped drive community alignment that turned lineage from a fragmented concern into a shared industry standard.

2018–2020 Principal Engineer - CTO Office - **DataStax** Remote - San Francisco, CA

Worked directly in the CTO office to prototype next-generation data-platform capabilities on Cassandra and translate research ideas into production-oriented systems. Served as the initial backend lead for a new SaaS effort, designed a novel approach to NoSQL query optimization, and built foundational components that informed product direction.

2015–2018 Principal Software Engineer - **Oracle Data Cloud/AddThis** Tysons Corner, Virginia

Led and developed petabyte-scale machine learning, natural language processing, hybrid search, and analytics infrastructure for ad-tech data science teams. Contributed an object storage layer to a novel streaming distributed database. Four-time hackathon winner across search, visualization, tracing, and in-memory analytics projects.

2014–2015 Software Engineer - **Mesoscale Discovery** Gaithersburg, Maryland

Built cloud laboratory management software and validated automation workflows for regulated clinical and life-science environments, with strong emphasis on testability and documentation quality.

2011–2013 Graduate Assistant - **Frostburg State University** Frostburg, Maryland

Taught labs, developed course materials, and mentored students in core computer science curriculum and extracurricular software/security projects.

2010–2011 Applications Engineer - **Micropact**

Herndon, Virginia

Built mission-critical Java/J2EE BPM software for DOJ and IRS programs while working directly with client teams in high-trust environments.

2008–2010 Web Developer - **Concept C Marketing & Design**

Frederick, Maryland

Developed and maintained responsive client websites, establishing early full-stack fundamentals that shaped later systems work.

education

Master of Science: Computer Science

Frostburg State University, Maryland

- 4.0/4.0 GPA
- Department Honors for academic excellence

Bachelor of Science: Computer Science

Frostburg State University, Maryland
